

This rim was mounted with **Tire Life**<sup>®</sup> when the vehicle was new, by a coal mine in Alberta, Canada.

You can see by the original paint, the complete lack of rust, and several bright spots of metal that **Tire Life**<sup>®</sup> has protected the rim from any rust or scale build up for over 30,000 hours.

## What is Tire Life®?

**Tire Life**® is a specially formulated, light viscosity fluid that offers exceptional tire and rim protection when added to the tire air chamber.

\* Specialty formulas available.

[www.fullerbros.com](http://www.fullerbros.com)

## Rust

**Tire Life**® stops rust buildup by providing a protective anti-oxidant coating on wheels and rims.

**Tire Life**® removes existing rust scale from wheels and rims, and reduces the amount of downtime normally required for refinishing wheels and rims.

**Tire Life**® installed in the recommended quantity, provides rust protection from the day the wheel is installed until it is dismantled.

**Tire Life**® will reduce the labor cost for tire dismantling.

## Under Inflation

Between regular air checks, some loss of tire p.s.i. is expected. With each pound of pressure loss, load carrying capacity is reduced and tire temperatures increase. **Tire Life**® reduces this normal air loss. Bead seats, o rings, vent hole leaking, blistered, or cracked innerliners, even liners that are lifted loose from the ply will be sealed off very effectively by **Tire Life**®.

## Cooling

In studies done by a major tire manufacturer, **Tire Life**® reduced tire casing temperature by as much as 7.5%. In other studies, **Tire Life**® reduced the tire operating temperatures by 19%. Whichever case, **Tire Life**® lowers tire temperature and that's good for the tire.
