Judging the correct quantity

For bias ply off the road tires add 30% more **Tire Life**® than recommended above. Quantities provided above are taken from an average. Each operation is different. Only you can predict your needs accurately.

How to know you are right

When the proper quantity has been applied, your tires will dismount easily, rim rust will be eliminated, and the tire inner-liner will benefit from anti-oxidant protection.

Notes

- For best use, you should make sure your wheels/rims and tires are well cleaned prior to installing Tire Life®. Tire Life® will clean rust and corrosion from your wheels/rims through the natural washing action created by a truck in motion. Tire Life® can be installed with an applicator tank into a mounted assembly without prior cleaning, but then should be checked or changed between 30 to 90 days.
- A good rule of thumb for judging the correct amount of Tire Life® per tire: If you dismount the tire and have 50% or more of the original install amount left in the tire then you are within good operating tolerances for the effectiveness of Tire Life®.
- Please contact your Fuller Brothers' Representative if you have any questions or if you would like an on-site assessment and follow up recommendations.
